Contents

Welcome to ValidateThis

ValidateThis is a validation framework for ColdFusion objects.

Its main goal is to provide a means of generating both client-side and server-side validations from a set of user-defined business rules.

Getting Started

[ValidateThis QuickStart Guide](#)

Upgrading Your Rule Definition Files

The format required for [rules definition files](#) changed in ValidateThis 0.98, in a way that makes older rules definition files incompatible. If you are upgrading from a version prior to 0.98 please read the following page which describes the change and includes a tip for easily upgrading your files using Eclipse.
